

Proxxon Rotary Tool Mount

The Proxxon rotary tool mount turns a Proxxon IB/E Professional Rotary Tool into an internal/external tool post grinder.

The Proxxon rotary tool mount replaces the tool post on your mini lathe. It includes a spacer so that the standard tool post stud and handle work to retain it.

When you receive your rotary tool mount the spacer might be clamped in the hole for the Proxxon rotary tool.

When you mount the Proxxon rotary tool in the rotary tool mount, be sure the speed control knob is positioned opposite from the compound rest. This prevents the rotary tool from binding on the rotary tool mount and compound rest.
